

Safety & Suitability Technologies (SST) Offering Products from Wilcoxon Research

Overview

Complementary to our primary business stream, we are UK representatives and resellers for Wilcoxon Research's range of ruggedised transducers, cables and accessories. Renowned for many years as the industry leader for this kind of transducer, Wilcoxon offers the security of reliability and consequent long life, so important where plant shutdowns can be extremely costly.

Specialised Products

Wilcoxon transducers are best known in the machinery monitoring business, whether in the Petrochemical, Paper Mill or Power Plant industries. They are however, highly successful in providing shipboard engine monitoring and specialised transducers for underwater applications, helicopter monitoring and seismic applications.

Wilcoxon Research, Inc is renowned for the quality and longevity of its transducers. Wilcoxon track returned accelerometers as part of their extensive quality program for continuous improvement. The percentage of accelerometers returned in any given year is less than 0.3% of those produced. This quality level is commensurate with an MTBF of nearly 3,000,000 hours.

Cranfield Aerospace Limited is a UK approved distributor for Wilcoxon Research products

- Accelerometers
- 4 - 20 mA Vibration Sensors
- Special Purpose Sensors
- Cables and Connectors
- Vibration Shakers
- Intrinsically Safe Sensors
- Accessories

Make Savings Now!

- Reliability reduces costly shut-down of plant
- Quantity discounts
- Stable pricing
- Backed by leading consultants

Served Industries

- Petrochemical
- Power Generation
- Paper Mills
- Defence
- Seismic
- Surveillance
- Civil Engineering
